What is Power BI?

Power BI is a collection of software services that work together to turn your unrelated sources of data into interactive insights.

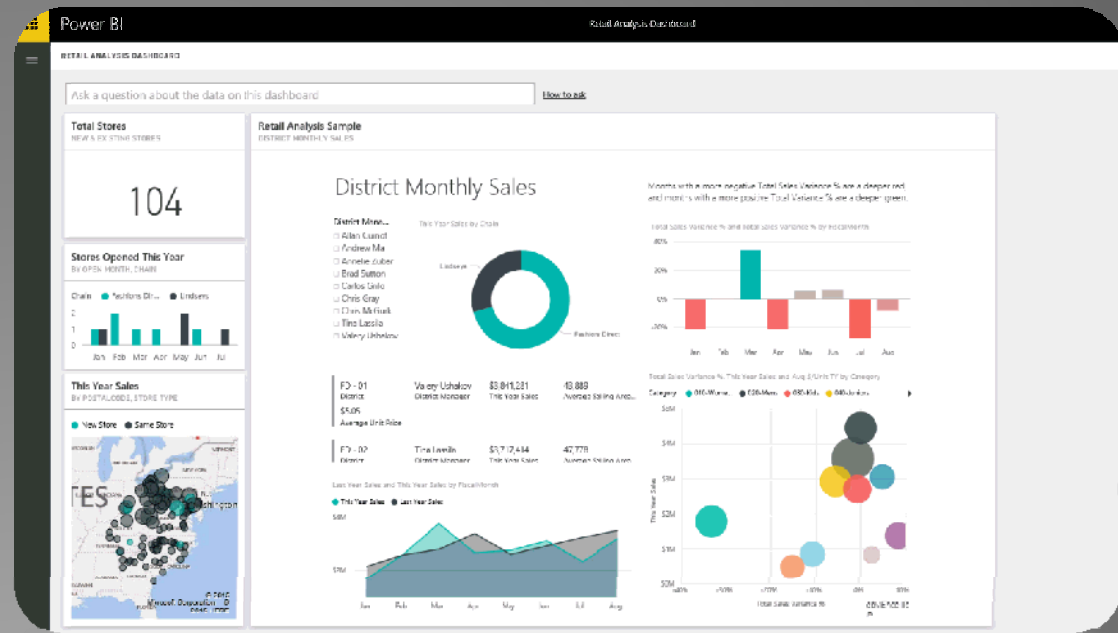

What is Power BI?

r BI

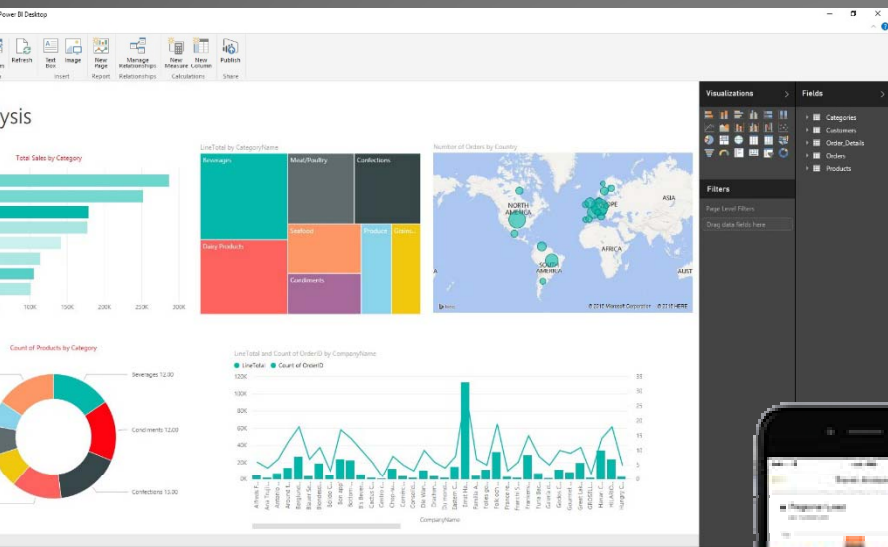

you easily connect to your sources,

visualize (or discover) what's important, and

share that with anyone or anyone you want

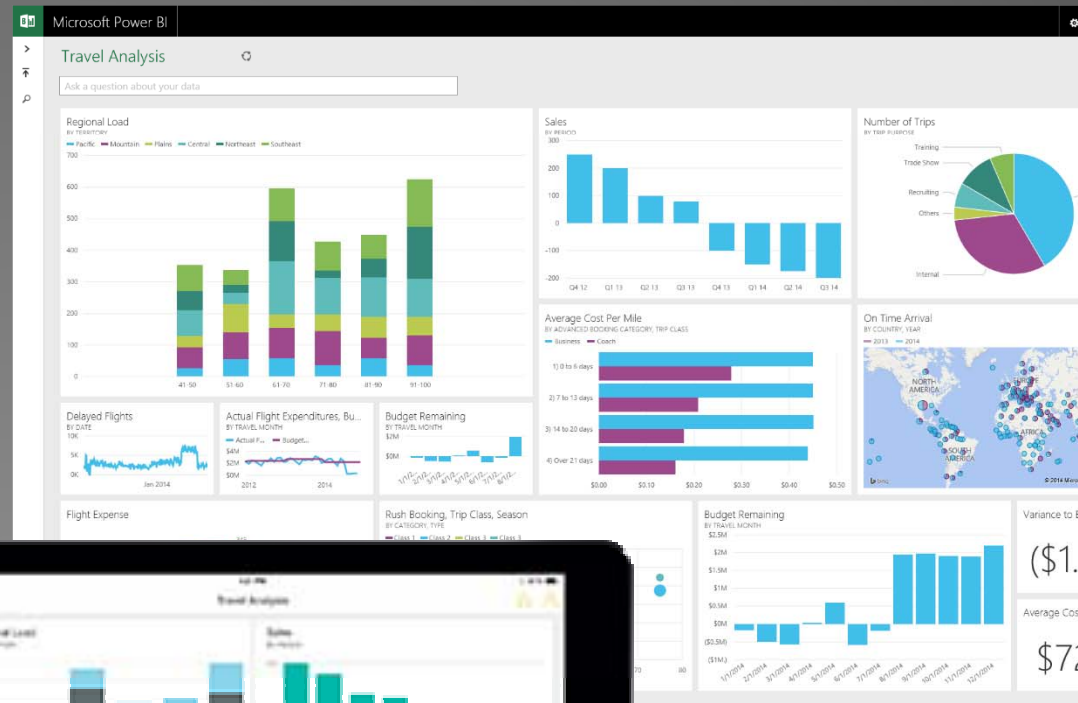

Access Points

Power BI Desktop

Connect to data sources
Model, Analyze & Enrich

Power BI Mobile

- Track data on the go

Power BI SaaS

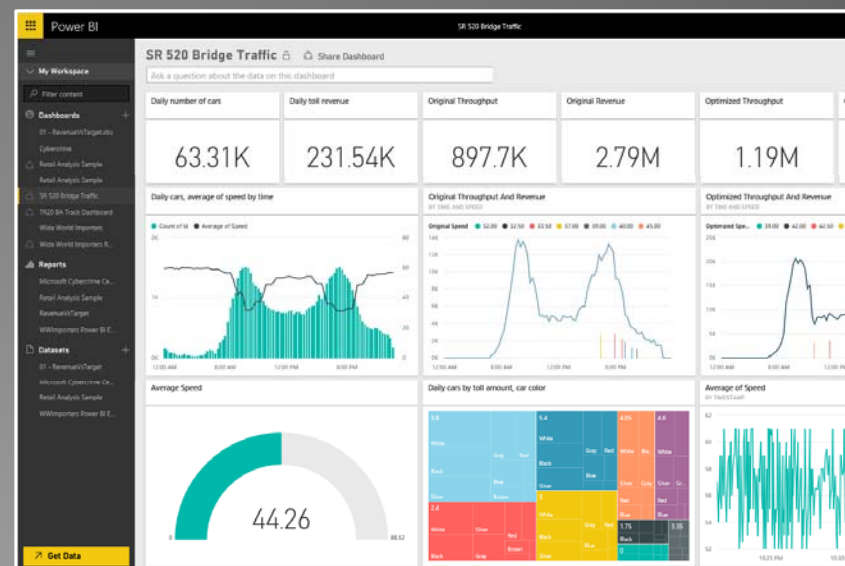

- Share Dashboards
- Connect to 3rd Party SaaS Applications

Power BI

Experience your data. Any data, any way, anywhere

Power BI is a cloud-based business analytics service that enables

- fast and easy access to your data
- a live 360° view of your business
- data discovery and exploration
- insights from any device
- collaboration across your organization
- anyone to visualize and analyze data

benefits and differentiators of Power BI

Pre-built dashboards and reports for popular SaaS solutions

Real-time dashboard updates

Secure, live connection to your data sources, on-premises and in the cloud

Intuitive data exploration using natural language query

Integrated with familiar Microsoft products and utilizes commitment for scale & availability in Azure

Fast deployment, hybrid configuration, secure, and integrated with existing IT systems.

Power BI Overview

Data sources

SaaS solutions
e.g. Salesforce, GitHub, Dynamics CRM

On-premises data
e.g. SQL Server Analysis Services

Organizational content packs
Corporate data sources or external data services

Azure services
Azure SQL, Stream Analytics...

Excel files
Workbook data / data models

Power BI Desktop files
Data from files, databases, Azure, and other sources

Description

Power BI Desktop puts visual analytics at your fingertips. With this powerful authoring tool, you can connect to data, create interactive data visualizations and reports.

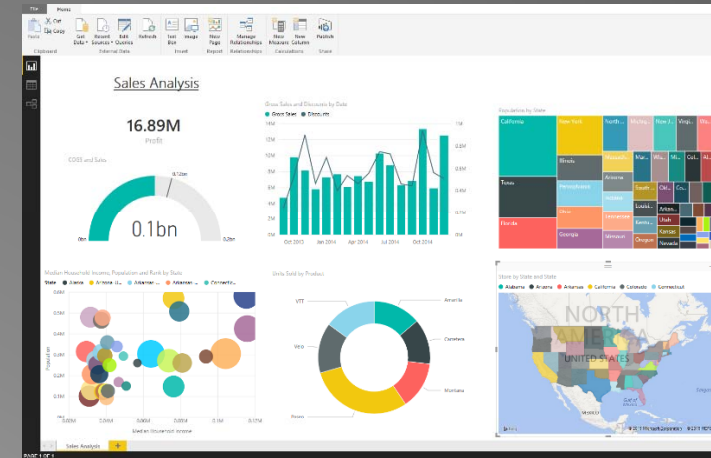

Connect, mash up and model, and visualize your data. Place visuals exactly where you want them. Analyze and explore your data, and share content with your team by publishing to the Power BI service.

Prepare, explore, report and collaborate with Power BI Desktop

- Acquire and prepare data with extensive query capabilities
- Establish data structure and transform and analyze data
- Explore data in new ways through a freeform, drag-and-drop canvas
- Author reports with a broad range of modern data visualizations
- Publish interactive reports to Power BI

Available as a free, downloadable desktop component of the Power BI service, **Power BI Desktop** is a visual exploration and reporting tool

Consolidate data from a broad range of sources

Feature Use Query functionality to connect to data from a variety of sources beyond those available from powerbi.com

- Navigate data quickly with in-memory processing that optimizes performance
- Pare down datasets to only what's needed by editing queries before data loading
- Ability to automatically find related tables when connecting to database sources

Data sources available through Power BI Desktop

File	Database	Azure	Other
<ul style="list-style-type: none"> • Excel • CSV • XML • Text • Folder 	<ul style="list-style-type: none"> • SQL Server • Direct Query for SQL Server • Access • SQL Server Analysis Services • Oracle • IBM DB2 • MySQL • PostgreSQL • Sybase • Teradata 	<ul style="list-style-type: none"> • SQL Database • Direct Query for SQL Database • SQL Data Warehouse • Marketplace • HDInsight • Blob Storage • Table Storage • HDInsight Spark • DocumentDB 	<ul style="list-style-type: none"> • Web • SharePoint List • Odata Feed • Hadoop File (HDFS) • Active Directory • Microsoft Exchange • Dynamics CRM Online • Facebook • Google Analytics • Salesforce Objects • Salesforce Reports • ODBC • appFigures • GitHub • QuickBooks Online
			<ul style="list-style-type: none"> • SweetIQ • Twilio • Zendesk • Spark • Blank Query • Mail Chimp

Shape data into the format and structure you need

- Transform data to fit your needs using intuitive UI
 - Select data for inclusion
 - Cleanse data and remove errors
 - Precisely tune the query step sequence: re-order, add, edit or delete steps as needed
 - Modify data types to support specific calculation requirements
- Very powerful for advanced scenarios such as Mashups

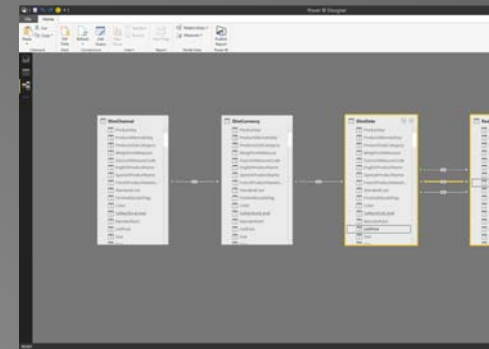

Common data-shaping tasks

- Remove rows
- Rename/Remove tables and columns
- Change a data type
- Delete Relationships
- Pivot columns and group rows
- Modify a table name
- Identify and fix errors
- Merge or append queries to combine data from multiple queries into a single query

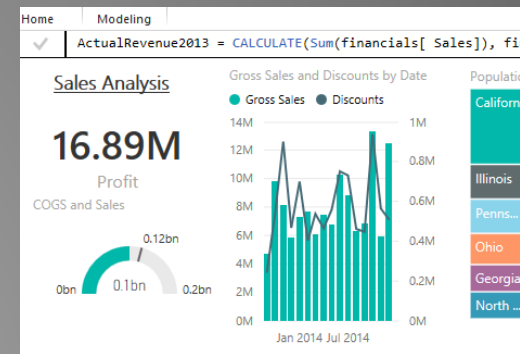

Produce rich data models using formulas and relationships

- Automatically create a model by importing data
 - Desktop detects relationships automatically, categorizes data and applies default summarization
- Refine models to enable complex calculations
 - Create relationships between tables manually or using the AutoDetect feature
 - Adjust relationship type (1:1, many:many, m:1) and cross-filter data for new insights

Apply complex schema and business logic to create rich, reusable data models

Create and modify relationships

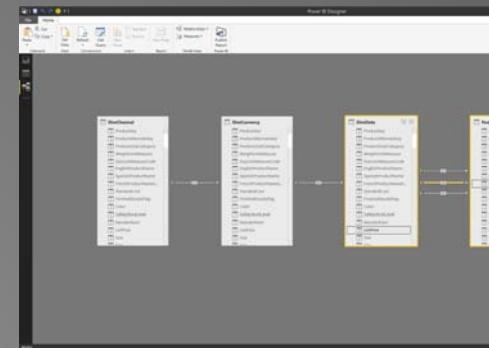

Define and use measures with DAX for

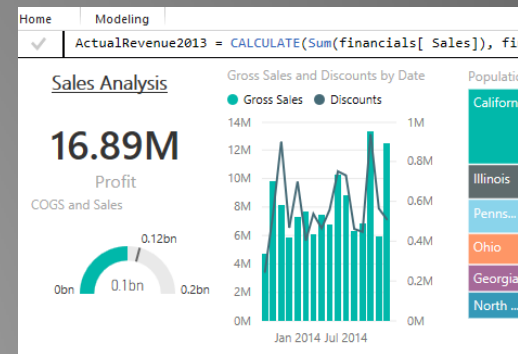

Produce rich data models using formulas and relationships

- Define calculations – known as measures – to generate new fields for use in reports
 - Use automatically generated measures, create custom measures, or create Calculated Tables with Data Analysis Expressions (DAX) formulas
- Develop advanced analytics using a combination of measures and relationships
 - Uncover correlations, highlight exceptions and understand business outcomes

Apply complex schema and business logic to create rich, reusable data models

Create and modify relationships

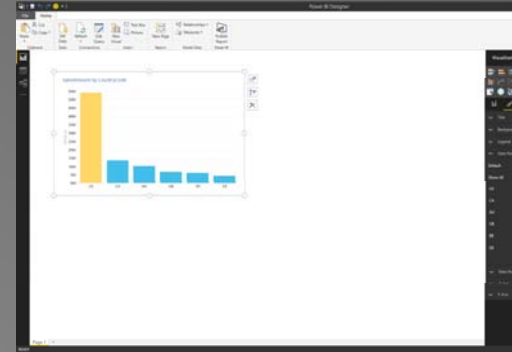

Define and use measures with DAX for

Explore your data with freeform, drag and drop canvas

- Explore data in a variety of ways and across multiple visualizations
 - Select data elements and sort data
 - Filter data and use cross-filter capabilities
 - Drill into and across datasets
 - Pivot and slice data
 - Change visualization types
 - Date sort and filters including Min & Max functions
 - Ability to refresh all views with a single click
 - Copy/Paste queries to/from Excel
 - Improved default sorting
 - Ability to sort the slicers
 - KPI Consumption when connecting to Analysis Services or importing Excel Workbooks with Data Model KPIs (Preview Feature)
- Select, transform and mashup data via a freeform, drag-and-drop canvas

Power BI Desktop allows you to explore data and create insightful visualizations on a freeform canvas

Deliver valuable insights with customizable visual reports

- Visualize data and author reports
 - Depict data in compelling reports that tell stories using a range of interactive visualizations
 - Use data from many sources in a single, consolidated report
 - Create relationships via drag & drop between 2 tables
 - Apply filters in visualization, page, and reports
 - Ability to drill down/up in column and scatter charts
 - Support for inserting Shapes in the Report canvas
 - Expand/Collapse All for multiple tables in Fields pane
 - Adjust reports to fit various screen sizes
 - Rename and delete tables and columns
 - Support for median, standard deviation, and variance
 - Ability to incorporate custom visualizations
- Change color, format and customize
 - Adjust Title, Background Color, Legend, Data Labels including color saturation values
 - Change X-Axis label direction
 - New visual color formatting with fixed and data driven settings
 - Linear or Logarithmic scales for values in Y-axis

Power BI Desktop allows you to create and customize reports that tell visually compelling data stories

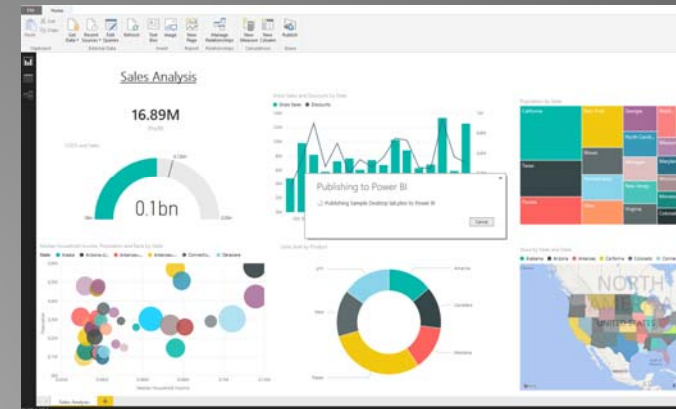

Share reports, visualizations and data with a broad audience

- Save Power BI Desktop report files and easily publish them to Power BI
- Share as appropriate with other Power BI users in your organization
- Changes to dashboards automatically sync across all users
- Copy table, cells or columns to clipboard

Import Power BI Desktop file in Power BI service

Publish from Power BI Desktop to Power BI service
