“The Economic Survey 2019-20 builds on India's aspiration of #Economy@5trillion with its theme of #WealthCreation. This Survey provides evidence to show that ethical wealth creation is an important national service. Those who create wealth are India's wealth! It integrates our old and rich tradition with contemporary evidence to emphasize that ethical wealth creation is a noble human pursuit. The Survey identifies two key pillars for furthering wealth creation in the economy – the invisible hand of markets supported by the hand of trust – and makes specific suggestions for job creation and wealth generation in the economy. I strongly recommend everyone to read the Survey and benefit from its ideas.”

## INTRODUCTION

Technical textiles is the emerging area for investment in India. The potential of technical textile in India is still untapped. Technical textiles represents a multi-disciplinary field with numerous end use applications. The production of different items of technical textile industry has been slowly but steadily increasing in the country. However there is lack of information regarding the status of the technical textile industry . The awareness on technical textiles among prospective entrepreneurs and consumers is very less. Hence entrepreneurs require details like market size , domestic and global scenario of technical textiles, details of govt schemes, list of existing technical textile manufacturers, importers and exporters , details of technical textile machinery manufacturers, etc. There is a need for an exclusive website for technical textiles.

This website endeavours to provide all the above information at one place.. This website apart from providing above details will also link all the stake holders at one place and also provide link to all Centres of Excellence of technical textiles and will be one stop shop for accessing information on technical textiles.

Delhi - Mumbai Industrial Corridor (DMIC) is India's most ambitious infrastructure programme aiming to develop new industrial cities as "Smart Cities" and converging next generation technologies across infrastructure sectors.

The objective is to expand India's Manufacturing & Services base and develop DMIC as a "Global Manufacturing and Trading Hub". The programme will provide a major impetus to planned urbanization in India with manufacturing as the key driver. In addition to new Industrial Cities, the programme envisages development of infrastructure linkages like power plants, assured water supply, high capacity transportation and logistics facilities as well as softer interventions like skill development programme for employment of the local populace. In the first phase eight new industrial cities are being developed. The programme has been conceptualized in partnership and collaboration with Government of Japan.
